Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

Claim 3; Page 111-113; 154pp; English.

This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf98-555. PDerf98-555 has a molecular weight of 98 kD, comprising 555 amino acids, and is a component of the Dermatophagoides

Der HMW-map; American house dust mite; antiallergic; mite; IgB; mite allergenic protein; immunoglobulin B; hypersensitivity;

Dermatophagoides farinae. immunocomplex formation.

```
composition. The HWW-map composition was isolated from a D. farinae composition. The HWW-map composition was isolated from a D. farinae composition. The HWW-map composition was isolated from a D. farinae composition, with each fraction being analysed for the presence of proteins that bound to IgB present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids cancing them, may be used in therapautic compositions to modify an enimal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, thumans, other pets, and work or domestic animals. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       540

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related mucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a nonpresing a susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the determined anti-bot HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing Mypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for alloiting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-protein susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the charaction of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU963142 represent Der HWW-map polypeptides of the invention

(map) PDerf98-536, the mature form of PDERF98-536 (AAY5523). PDerf98-536

(map) Popular weight of 98 KD, composition acids, and is a

allergen protein (HWM-map) composition. The HWM-map composition was

isolated from a D. farinae homogenate by gel filtration, with each

creation being analysed for the presence of proteins that bound to IgB

present in mite-allergic dog antisera. Wite allergenic proteins and

peptides, and nucleic acids encoding them, may be used in therapeutic

compositions to modify an animal's hyperensitivity reaction to mite

allergens. Animals that may be treated include mammals and birds,

compositions to modify an animal's equines, humans, other pets, and work or

allergens. Animals The proteins of tragmente may also be used to diagnose

allergies via a skin test. The proteins and peptides can also be used to

craise antibodies, which have a variety of potential uses. For example,

they can be used as vaccines to passively immunise animals against dust

mite hypersensitivity, as positive controls in test kits and as tools to

crecover desired dust mite allergens from a mixture of proteins
                                                                                            Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.
                                                                                                                                                                                             Claim 3; Page 125-127; 154pp; English.

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related mucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a nonpresing by susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A the DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA map protein can be used in the disease. Antibodies that bind to Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IGB, to prevent immunocomplex formation, thus creducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96312 represent Der HWW-map protein envention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      181 PGKDKIDRAYDIKELNKLFDWMNVMTYDYHGGWENFYGHNAPLYKRPDETDELHTYFNVN 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) Phorp98-509. Phorp98-509 has a molecular weight of 98 KD, comprising 509 amino acids, and has a high degree of homology with the Drarinae 98 kD allergen, map8 (AAY2523). Nucleic acid molecules encoding Pherp98-509 were isolated from a D. pteronyssius cDNA library by Mybridisation with a probe encoding the D. farinae high molecular weight map (HWW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to

modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite allerge shypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins. The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for allciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A learned of allergic response to a mite. A learned of allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map protein activity associated with a binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANUS6314-AAU96342 represent Der HWW-map polypeptides of the invention mite allergenic protein isolated from Dermatophagoides, designated HWW-map protein, useful as a vaccine for treating mite allergy. This sequence represents Dermatophagoides pteronyssius mite allergen

protein (map) Poerp98-490, the mature form of pDerp98-509. Poerp98-490

chas a molecular weight of 98 kD, comprising 490 amino acids, and has a high degree of homology with the D. farinae mature 98 kD allergen, mapB (CC (AAY52525). Nucleic acid molecules encoding poerp9-490 were isolated from a D. perconysius cDNA library by hybridisation with a probe cocding the D. farinae high molecular weight map (HMW-map) composition.

Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal; s hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, char pets, and work or domestic animals. The proteins and palso be used to diagnose allergies via skin test. The proteins and poptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively intest kits and as tools to recover desired dust mite appearance of intest kits and as tools to recover desired dust mite allergens from a little of proteins. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          : high molecular weight Dermatophagoides nucleic acid polypeptides to modify an animals' hypersensitivy to mite allergens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for aliciting an immune response against Der HWW-map protein or a reagant comprising a nonproteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal to allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the city immunoglobulin (Ig) or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to Igs, to prevent immunocomplex, formation, thus creducing hypersensitivity responses to mite allergens, and as vaccines against mite allergens, hypersensitivity. Sequences AAU96314-AAU96342 represent Der HWW-map protein on the invention

Drosophila melanogaster.

```
fusion proteins comprise a ranslocating moiety and a toxic moiety, where the translocating moiety is a plant protein (e.g. a lectin) capable of a cating as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an insect-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable insect peptides and metabolites and analogues. Polynucleotides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists degradation in the insect gut
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 305
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   535

                                                                                                                                                                                                                                                                                                                                                                                                                                                insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence for for for form part of the parinted specification, but was obtained in electronic form part of from WIPO at ftp.wipo.int/pub/published_pct_sequences

The CDNA can be inserted into a vector for host expression of the chitinase protein, and may be utilised to control a population of insect pests. A recombinant baculovirus vector is provided for this purpose, as well as a transgenic tobacco plant that shows increased resistance to tobacco hornworm. Recombinant chitinase may also be expressed in host cells or larvae for subsequent purification and use as a biocide. The insect chitinase is expected to be more potent as an insect control agent than chitinases from other sources

Manduca sexta chitinase

```
The present sequence is the protein sequence for the Manduca sexta gut chitinase. It was used to isolate the Drosophila melanogaster imaginal disc growth factor 4 (IDGF4) coding sequence. IDGF4 is a member of the chitinase related proteins (CHRP) and is involved in the promotion of expected to have mammalian homologues. The gene and protein are expected to have mammalian homologues. They can be used in the treatment of cancer, wound healing, tissue regeneration following arthritis, osteoporosis, other skeletal disorders and burns, for revitalising scartissue resulting from surgical procedures, irradiation, laceration, toxic chemicals, viral or bacterial infection or burns, to promote tissue growth during tissue engineering, for example tissues for skin graft replacements and bone responth, and to modulate the function of the female reproductive tract. In addition, they can also be used to increase meat, egg, sperm and milk production in animals. One possible method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     497

This protein can be used in claimed fusion proteins of the invention. Such fusion proteins comprises a translocating moiety and a toxic moiety, where the translocating moiety is a plant protein (e.g. a lectin) capable of acting as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an insect-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects Suitable insect peptides and proteins include allatostatins, chitinase, diuretic hormone and their wetwoirles and analogues. Polymucleotides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IYSFIGVTEGNSEVLIIDPELD-----VDKNGFRNFTSLRSHPSVKFMVAVGGWAEGSS 110

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 41, Application US/10218743

Publication No. US2030096779A1

GENERAL INFORMATION:
APPLICANT: McCall, Catherine A.
APPLICANT: Hunter, Shirley Wu
APPLICANT: Hunter, Eric R.
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: ADD USES THEREOF
FILE REFERENCE: AL-2-C3
CURRENT APPLICATION NUMBER: US/10/218,743

CURRENT FILING DATE: 2002-08-13

PRIOR FILING DATE: 1999-04-15

PRIOR FILING DATE: 1999-04-15

PRIOR FILING DATE: 1999-05-02

PRIOR FILING DATE: 1998-05-13

Sequence 10. Application US/10004219B

Publication No. US20030087414A1

GENERAL INFORMATION:

APPLICANT: Macrozyme

APPLICANT: Boot, Rolf G.

TITLE OF INVENTION: A mammalian mucinase, its recombinant production, and

TITLE OF INVENTION: A mammalian mucinase, its recombinant diseases in

TITLE OF INVENTION: A mammalian mucinase, its recombinant diseases in

TITLE OF INVENTION: Which mucus is involved or infection diseases in

US-10-161-547-14

Sequence 14, Application US/10161547

PUDLICATION NO. US20030143216A1

GENERAL INFORMATION:

APPLICANT: Gray, Patrick W.

APPLICANT: Tjoelker, Larry W.

TITLE OF INVENTION: CHITINASE CHITIN-BINDING FRAGMENTS

FILE REFERENCE: 27866/35407

CURRENT APPLICATION NUMBER: US/10/161,547

CURRENT FILING DATE: 2002-06-03

PRIOR APPLICATION NUMBER: US/09/267,574

PRIOR APPLICATION NUMBER: EARLIER APPLICATION NUMBER: 09/039,198

PRIOR APPLICATION STREET FRIENCE DATE: 1998-03-12

NUMBER OF SEQ ID NOS: 39
; OTHER INFORMATION: Description of Artificial Sequence: mouse AMCase; CTHER INFORMATION: amino acid sequence deduced from cDNA sequence US-10-004-219B-4

igh molecular weight Dermatophagoides nucleic acid polypeptides modify an animals' hypersensitivy to mite allergens. Novel high used to

Claim 3; Page 125-127; 154pp; English.

This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf98-556 (AAV52523). PDerf98-536 has a molecular weight of 98 kD, comprising 536 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite allergen protein (HMM-map) composition. The HMM-map composition was allergen protein (HMM-map) composition. The HMM-map composition was faraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         480
compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VFDPYQDDNHNSWEKRGYERFNNLRLKNPELTTMISLGGWYEGSEKYSDMAANPTYRQQF 120

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a nonprotein susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to a llergic response to a mite. The DNA and protein can be used in the allergic response that DNA map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgB, to prevent immunocomplex formation, thus be reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU96314-AAU96342 represent Der HWW-map protein on the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

This sequence represents Dermatophagoides farinae mite allergen protein

(map) PDerf98-555. PDerf98-555 has a molecular weight of 98 kD,

comportains 555 anino acids, and is a component of the Dermatophagoides

composition. The ENW-map composition was isolated from a D. farinae

homogenate by gel filtration, with each fraction being analysed for the

presence of proteins that bound to IgB present in mite-allergic dog

confosition. The allergenic proteins and peptides, and nucleic acids

encoding them, may be used in therapeutic compositions to modify an

antisera. Mite allergenic proteins and peptides, and nucleic acids

encoding them, may be used in therapeutic compositions to modify an

animal's hypersensitivity reaction to mite allergens. Animals that may be

treated include mammals and birds, especially felines, canines,

humans, other petes, and work or domestic animals. The proteins or

fragments may also be used to diagnose allergies via a skin test. The

proteins and peptides can also be used to raise antibodies, which have a

variety of potential uses. For example, they can be used as vaccines to

possively immunise animals against dust mite hypersensitivity, as

possively immunise animals against dust mite hypersensitivity, as

possively immunise animals against dust mite hypersensitivity, as

possively man perfect and as tools to recover desired dust mite
                                                                                                                                                                     Mite allergen protein; map; high molecular weight; HWW-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapA; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline; canine; veterinary; antibody; vaccine; immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.
                                                                                                                                   House dust mite (D. farinae) mite allergen protein (map) PDerf98-555.

AAY52523
```

```
New mite allergenic protein isolated from Dermatophagoides, designated
Der HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                               Der HMW-map, American house dust mite; antiallergic; mite; IgE; mite allergenic protein; immunoglobulin E; hypersensitivity; immunocomplex formation.
                                                                                                                                                                                                                                                                                                                                           Claim 12; Page 114-116; 161pp; English.

acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)s or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to 1gs, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HWW-map polypeptides of the invention
designated Der HMW-map
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 555 AA;

Der HMW-map, American house dust mite; antiallergic; mite; 1gE; mite allergenic protein; immunoglobulin E; hypersensitivity; AAU96328 standard; protein; 555 Der HMW-map polypeptide #15 (first entry) immunocomplex formation. 15-JUL-2002 AAU96328;

Dermatophagoides farinae.

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the categories of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgB, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HWW-map polypeptides of the invention n Dermatophagoides, designated for treating mite allergy. 1 SIKRDHNDYSKNPMRIVCYVGTWSVYHKVDPYTIEDIDPFKCTHLMYGFAKIDEYKYTIQ 20 SIKRDHNDYSKNPMRIVCYVGTWSVYHKVDPYTIBDIDPFKCTHLMYGFAKIDEYKYTIQ 121 IQSVLDFLQEYKFDGLDLDWEYPGSRLGNPKIDKQNYLALVRELKDAFEPHGYLLTAAVS 140 IQSVLDFLQEYKFDGLDLDWEYPGSRLGNPKIDKQNYLALVRELKDAFEPHGYLLTAAVS 200 PGKDKIDRAYDIKELNKIFDWANVMTYDYHGGWENFYGHNAPLYKRPDETDELHTYFNVN VFDPYQDDNHNSWEKRGYERFNNLRLKNPELTTMISLGGWYEGSEKYSDMAANPTYRQQF 80 VFDPYODDNHNSWEKRGYERFNNLRLKNPELITMISLGGWYEGSEKYSDMAANPTYROOF 181 PCKDKIDRAYDIKELNKLFDWMVMTYDYHGGWENFYGHNAPLYKRPDETDELHTYFNVN YTMHYYLNINGATRDKLVMGVPFYGRAWSIEDRSKLKLGDPAKGMSPPGFISGEEGVLSYI 260 YTMHYYLNNGATRDKLVMGVPFYGRAWSIEDRSKLKLGDPAKGMSPPGFISGEEGVLSYI 301 BLCQLFQKEEWHIQYDEYYNAPYGYNDKIWVGYDDLASISCKLAFLKELGVSGVMVWSLE Gaps ö Length 555; Indels Score 3014; DB 5; Pred. protein (map) Poerp98 490, the mature form of poerp98-509. Poerp98 490
thas a molecular weight of 98 kb, comprising 490 amino acids, and has a
high degree of homology with the D. farinae mature 98 kb allergen, mapp
(AAY52525). Nucleic acid molecules encoding Poerp98 490 were isolated
from a D. pteronyssius cDNA library by hybridisation with a probe
encoding the D. farinae high molecular weight map (HMW-map) composition.
Mite allergenic proteins and peptides, and nucleic acids encoding them,
may be used in therapeutic compositions to modify an animal's
hypersensitivity reaction to mite allergens. Animals that may be treated
include mammals and birds, especially felines, canines, equines, humans,
other pets, and work or domestic animals. The proteins or fragments may
peptides can also be used to caise antibodies, which have a variety of
potential uses. For example, they can be used as vaccines to passively
in munise animals against dust mite hypersensitivity, as positive controls
in test kits and as tools to recover desired dust mite allergens from a
mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)
